Great! My brain quickly tuned out the reflection, so I wouldn't worry about it. I liked how you started on the Ile and then moved to the IIGs. And this also served as a Mini-Assembler refresher.

The annotations where you cite book and page numbers are helpful and worth the extra time it takes you to include them. I see them as sort of a beginning "What's Where in the Apple IIGS Documentation" -- something that I have not yet figured out.

Some questions came to mind, that maybe you can answer here, in comments on YouTube, or maybe in later videos if we're getting there:

- At ~14:00 did you mean to say that the colors correspond to the lores colors?
- Why did you use BRA instead of JMP?
- Is BRA only available on 65c02 and not 6502?
- When you list memory on the IIGS what are the suffixes? For example at ~14:36, the "-v" in "F6-v" at 00/C022. (I think I know what the 00/ prefix means, but others new to 65c816 may not.)

Where would you prefer to see and answer comments to the videos? Here? On Youtube? On the Apple II Enthusiasts FB page? Any of the above?

Thanks for the video! Looking forward to the next one.
