Subject: Issues reading the Forum on Windows using Chrome

When I'm using my Windows 7 PC + Chrome (Version 37.0.2062.124 m), I do not see all Topics.

If I click on Video game Programming, the link is :

   http://apple2.gs/forum/index.php?t=thread&frm_id=19&

And I don't see any messages. If I remove the last & of the URL :

   http://apple2.gs/forum/index.php?t=thread&frm_id=19

I can see the Topics list, but sometimes not the latest (or more recent) one. I have to use the Today's Message feature to access them.

BTW, I have no problem using Safari on my IPhone 5.

   Oliviez

I apologize. You brought this up the other day and I hadn't had a chance to reply.

I was unable to reproduce with the exact same Chrome version on Windows 7, and I also tested against a newer version of Chrome (and OSX Chrome). It could be an issue with site caching or browser caching. I will look into the cache settings for the site and see if I can find any useful options.

If anyone else sees this behavior, could you please reply to this thread and maybe let me know the configuration/url/screenshot? (not that important to get screenshot, but you never know)

I'm sorry for the inconvenience.

I've had similar trouble seeing topics, though I think it was limited to topics I had posted in. It would have been Mac OS X and Chrome most likely. I'll start paying attention to version numbers and devices.
